We hope you will enjoy browsing through our latest catalogue.

In Tasmania, we are fortunate to experience a cool, temperate climate and there is nothing that indicates the change of seasons more than a deciduous tree. From the lush shoots or flowers of spring, to the shaded canopy of summer, to the changing leaf colour of autumn and finally, the ghostly branches of winter, the deciduous tree is the perfect specimen for your garden. It will provide shade through the heat of summer and allow sun into your garden in the cold of winter. We carry a large range; from the smaller growing trees such as Japanese Maples, to the larger growing Elms and Birches.

To ensure a wide selection of trees, we order from a number of different suppliers. Therefore, the availability of stock listed in this catalogue is subject to delivery from our suppliers. If you do not see the particular tree that you want listed, please enquire as it may be available.

We will notify customers as their orders are filled and unless prior arrangements are made, we require all orders to be collected by the end of July. This will ensure that customers receive their trees in prime condition.

Whilst Chandlers Nursery will take every possible precaution to ensure that the trees we sell are true to name and label, we cannot be held responsible for errors outside our control. We will replace wrongly labelled trees where possible, or substitute where necessary.

Please note that varieties not specified as potted will be bare-rooted.

PLANTING AND CARE

The site of planting should be well prepared prior to planting. Dig a hole roughly double the size of the root ball and mix compost or manure with the existing soil. We recommend Chandlers Organic Compost for planting. Water in well with Seasol and firm the soil gently. Seasol stimulates root growth and minimises transplant shock. This is especially important as a lot of our ornamental trees are ground grown and are dug up when dormant. Continue Seasol fortnightly until the beginning of spring. This will improve drought hardiness of your tree. For people in drier areas, it would be advisable to plant fruit trees with water storage crystals or Seasol Planting Gel.

Spring is the time to mulch around your new trees, ensuring to leave a gap around the trunk. This helps retain moisture in the soil and prevents competitive weeds from sprouting. Our dry summers can make it hard for trees to establish and we suggest several deep soakings a week either using an automatic system, or by hand. Increase this to 3-4 times a week in very hot weather.
